Chevrolet's inline 6-cylinder, affectionately known as the "Stovebolt," was produced and applied to Chevrolet-powered automobiles from 1929 through 1962. Its effectiveness and simplicity greatly contributed to the lengthy duration of its life span, with the engine still being created in some capacity into 2009.

Deve Krehbiel of devestech.net has taken his decades of knowledge on the inline-6 and created the ultimate resource on rebuilding the Stovebolt Chevrolet powerplant. Using color photography with step-by-step sequencing, Deve takes you through the disassembly, rebuild, and reassembly of these engines, including rebuilding the carburetor, distributor, and intake/exhaust systems. Tech Tips highlight areas that can be overlooked, such as proper cleaning and determining if a part is reusable, and an appendix provides information on decoding casting numbers. With millions of Chevrolets built with an inline-6 engine, there's no shortage of candidates for a rebuild. With Chevrolet Inline-6 Engine: How to Rebuild, you will now have the perfect complementary tool to walk you through the entire engine-rebuilding process. p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 12.0px Arial}

Mueller's text includes the rise of the Depression-era trucks that made Chevrolet the number one manufacturer of light pickups, and Chevy's 30-year run in that top spot. Mueller explains how the leaders and engineers at Chevrolet made the company's truck line such a dominant force- and goes in-depth on many specific models that had enormous impact on the pickup truck industry. From the resumption of automobile production at the close of World War II through the 1950s, the American auto industry would see the births and deaths of several manufacturers, great technological advances, and an era of dramatic styling as a prospering nation asserted its growing mobility. Cars of this period are among the most iconic vehicles ever built in the United States: the 1949 Ford, the remarkable Studebaker designs of 1950 and 1953, the 1955–1957 Chevrolets, the "Forward Look" Chrysler products, the ill-fated Edsel and many others. This comprehensive reference book details every model from each of the major manufacturers (including independents such as Kaiser-Frazer and Crosley but excluding very low-volume marques such as Tucker) from model years 1946 through 1959. Year by year, it provides an overview of the industry and market, followed by an individual report on each company: its main news for the year (introductions or cancellations of models, new engines and transmissions, advertising themes, sales trends etc.); its production figures and market status; and its powertrain offerings, paint colors and major options. The company's models are then detailed individually with such information as body styles, prices, dimensions and weights, standard equipment and production figures. Nearly 1,000 photographs are included.

This book continues the fascinating chronicle of America's number-one carmaker as it gets behind the war effort in the 1940s and then reaps the rewards of the postwar boom. Some of the book's unique features include more than 200 long-presumed lost photos from the GM Media Archives, and never-before-published details on Chevrolets from each model year covered.

Handsome, ready-to-color images, attractively rendered in precise detail, depict the sleek 1950 Mercury two-door sedan, luxurious 1952 Cadillac four-door sedan, 1953 Buick Skylark convertible with wire wheels, 1957 Lincoln Continental Mark II, and 26 other impressive models. Captions. 30 black-and-white illustrations.

As the 1950s dawned, General Motors focused its industrial might on producing revolutionary rather than evolutionary cars with the ultimate goal to become the clear market leader in the automotive industry. To accomplish this goal, the company designed, developed, and consistently released innovative automotive technology. During the decade, Chevrolet introduced the small-block V-8, automatic transmission, air-conditioning, power steering, and many other innovations that made the cars faster, more

comfortable, and safer. All of the pieces had fallen into place. General Motors had astute leadership, a brilliant engineering team, forward-thinking stylists, a massive manufacturing infrastructure, and the capability to produce cutting-edge technology. With unbridled optimism and exuberance to meet the demands of the booming U.S. economy of the 1950s, the company designed, developed, and delivered an unprecedented number of breakthrough technologies, and established the blueprint for the modern automobile. Automotive historian and veteran author David Temple goes behind the scenes to reveal how these technologies were designed, manufactured, and installed on Chevrolet's fine portfolio of cars: the Corvette, 1955-1957 Bel Air, Nomad, Impala, and many more. Inside General Motors, many dedicated and talented leaders who were determined to make Chevrolet cars the best on the market. Vice President of Styling Harley Earl and his team designed the 1952 Corvette concept car for the Motorama show. After receiving numerous accolades, it was rushed into production. Design chief Bill Mitchell used his design acumen and creative vision as he led his team to style the 1955-1957 Bel-Air. Zora Arkus-Duntov worked tirelessly and transformed the Corvette from a touring car into a genuine sports car. Ed Cole and his engineers overcame many challenges to develop the compact, efficient, and powerful Chevy small-block V-8, which continued in production for decades. Chevrolets of the 1950s retraces the design, development, and production of these cars, but it also covers innovative vital components that were installed in them. If you have been looking for the inside story on GM's arguably greatest decade, the models, and the technology it produced, you have found it.

Tom Cotter returns to troll through Detroit and discover long forgotten classics in Motor City Barn Finds. You won't believe some of the rides he finds. Detroit has been America's Motor City for decades. It's home to Ford, General Motors, and Chrysler, as well as numerous auto industry companies and specialty and speed shops. At the same time, it's the poster child for urban blight and dysfunction. It's truly a city of contrasts, which presented challenges and opportunities in equal measure to barn finder Tom Cotter. In Motor City Barn Finds, Cotter plies his trade in a locale rich with automotive history. Detroit's lost cars are abandoned in empty lots, resident in decrepit buildings, squirreled away in garages, and stashed in historic wrecking yards. Behind the wheel of his classic 1939 Ford Woodie, Cotter trolls the back streets and neighborhoods of this historic city looking for lost automotive gems accompanied by photographer Michael Alan Ross. As America's Motor City, Detroit is an emotional and historical mecca for car enthusiasts, capable of drawing hundreds of thousands of car people for events like Woodward Dream Cruise and attracting design-forward companies like Shinola. At the same time, it's intimidating to navigate, with numerous dodgy neighborhoods and risky abandoned factory sites. Add it all together and you have fascinating and intriguing opportunities to dig for barn-find gold. In an age of unbridled American enthusiasm and towering industrial might, the GM Motorama was a dazzling and elegant show that was unlike any automotive event before it or since. General Motors staged extravagant and elaborate Motorama shows that rivaled some fashion shows. It showcased some of the most revolutionary and innovative prototype and dream cars ever built. And it captured the imagination of the car-buying public from 1950 to 1961. Motorama expert and experienced author David Temple has comprehensively researched the show, the cars, and the personalities to create a fascinating new story with many new photos of these magnificent cars. Because television was in its infancy, GM's President Alfred Sloan believed that the Motorama was the most effective way to market GM products and design prowess. Legendary stylist Harley Earl led a talented group of designers and engineers to dream up, style, and develop some of the most remarkable prototype cars of all time. While current production Buick, Chevy, Cadillac, and Pontiac cars were showcased, the bold, radical, awe-inspiring prototype and dream cars stole the show. These included the GM Le Sabre, replete with aerospace design and an aluminum engine; the fiberglass-bodied Corvette dream car, which went into production after overwhelmingly positive response; and the jet engine-powered Firebird. Temple goes into fascinating detail on the body, frame, engine, drivetrain, and all the special features of each model. He has also retraced the ownership histories of some of these cars. Within the pages of this volume, you get to relive this glorious era of automotive history and revisit the advanced show cars that inspired so many new models. This book features fascinating period photography of Motorama cars at the show, in development, and at different locales. No other automotive show rivaled the Motorama for stunning productions and awe-inspiring cars, which makes this a must-have book.
