American business folklore is awash with the adventures of successful entrepreneurs. Still, most of these stories are about Americans, neglecting important and courageous entrepreneurs from other countries. Made in Korea recounts the story of how Chung Ju Yung rose from poverty to build one of the world's largest and most successful building empires - Hyundai - through a combination of creative thinking, tenacity, timing, political skills, and a business strategy that few competitors ever understood. Chung entered the shipbuilding business with no experience and went on to create the world's largest shipyard. He began making automobiles when foreign experts unanimously predicted he would fail, and he started a global construction company that has built some of today's greatest architectural wonders. He even convinced the International Olympic Committee to select South Korea over Japan as the site for the highly successful 1988 Olympics. Unlike most CEO's of major firms, Chung has always preferred the company of his workers to that of the global executive elite. Hard work, creativity and a capacity to never give up - this is the essence of Chung's life. In each of his ventures, he exhibited a sheer determination to succeed, regardless of the obstacles, and he worked tirelessly to instil this drive in all of his employees. Even today, in the midst of Korea's worst economic crisis in over four decades, Chung's company is busy implementing plans to emerge as an even stronger contender in the world economy. Illustrated with 32 pages of colour photographs not previously seen in the West, including photos of Chung's recent historic visit to North Korea in 1998, Made in Korea takes stock of Chung's entire life, highlighting both his contributions to society and the lessons his work can teach to aspiring entrepreneurs.

This book gathers state-of-the-art research in computational engineering and bioengineering to facilitate knowledge exchange between various scientific communities. Computational engineering (CE) is a relatively new discipline that addresses the development and application of computational models and simulations often coupled with high-performance computing to solve complex physical problems arising in engineering analysis and design in the context of natural phenomena. Bioengineering (BE) is an important aspect of computational biology, which aims to develop and use efficient algorithms, data structures, and visualization and communication tools to model biological systems. Today, engineering approaches are essential for biologists, enabling them to analyse complex physiological processes, as well as for the pharmaceutical industry to support drug discovery and development programmes.

In this book, the world's foremost experts on pricing integrate theoretical rigor and practical application to present a comprehensive resource that covers all areas of the field. This volume brings together quantitative and qualitative approaches and highlights the most current innovations in theory and practice. Going beyond the traditional constraints of "price theory" and "price policy," the authors coined the term "price management" to represent a holistic approach to pricing strategy and tactical implementation. They remind us that the Ancient Romans used one word, pretium, to mean both price and value. This is the fundamental philosophy that drives successful price management where producer and customer meet. Featuring dozens of examples and case studies drawn from their extensive research, consulting, and teaching around the world, Simon and Fassnacht cover all aspects of pricing following the price management process with its four phases: strategy, analysis, decision, and implementation. Thereby, the authors take into account the nuances across industry sectors, including consumer goods, industrial products, services, and trade/distribution. In particular, they address the implications of technological advancements, such as the Internet and new measurement and sensor technologies that have led to a wealth of price management innovations, such as flat rates, freemium, pay-per-use, or pay-what-you-want. They also address the emergence of new price metrics, Big Data applications, two-sided price systems, negative prices, and the sharing economy, as well as emerging payment systems such as bitcoin. The

result is a “bible” for leaders who recognize that price is not only a means to drive profit in the short term, but a tool to generate sustained growth in shareholder value over the longer term, and a primer for researchers, instructors, and students alike. Praise for Price Management “This book is truly state of the art and the most comprehensive work in price management.” - Prof. Philip Kotler, Kellogg School of Management, Northwestern University “This very important book builds an outstanding bridge between science and practice.” - Kasper Rorsted, CEO, Adidas “This book provides practical guidelines on value creation, communication and management, which is an imperative for businesses to survive in the coming era of uncertainty.” - Dr. Chang-Gyu Hwang, Chairman and CEO, KT Corporation (Korea Telecom)

In chassis development, the three aspects of safety, vehicle dynamics and ride comfort are at the top of the list of challenges to be faced. Addressing this triad of challenges becomes even more complex when the chassis is required to interact with assistance systems and other systems for fully automated driving. What is more, new demands are created by the introduction of modern electric and electronic architectures. All these requirements must be met by the chassis, together with its subsystems, the steering, brakes, tires and wheels. At the same time, all physical relationships and interactions have to be taken into account.

Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard Space Flight Center
