In today's pressure-cooker society, youth need to tap into their strengths, acquire specific skills to cope, recover from adversity, and be prepared for future challenges. That's a tall order for young people but may be particularly challenging for youth exposed to chronic stress or traumatic experiences. Most risky teen behaviors serve at least partly as coping strategies that help youth manage uncomfortable stressors. These behaviors offer fleeting relief but lead to troubling patterns that only magnify stress and are in some cases life threatening. Helping youth develop a range of positive alternative coping strategies may diminish their need to turn to these worrisome quick fixes and will prepare them to thrive. Developed for all youth serving professionals, *Guiding Adolescents to Use Healthy Strategies to Manage Stress* helps you - Improve your skill sets in helping adolescents manage life's challenges. - Offer practical approaches for guiding youth to control their reactions and choose healthier behaviors - Use strategies to de-escalate tension when stressors lead to crises

Organization Development (OD) is key to ensuring that organizations and their people can adapt to and engage in ongoing change in today's fast-paced and competitive world. How can those responsible for managing change determine the most appropriate course of action for their organization's needs and maximize capability? Written by two of the leading experts in the field, *Organization Development* is an essential guide to the theories, practices, tools and techniques for achieving success. It explores the role of HR in relation to OD, and connected areas such as organization design, building organizational agility and resilience, and culture change. Alongside international case studies from organizations including Ernst & Young, Nationwide, Lockheed Martin and the University of Sheffield, UK, this revised third edition of *Organization Development* contains new chapters on building an adaptive culture of learning and innovation and organization health and 'use of self'. With fresh material on digitization, OD in

SMEs, and competence profiles, this is an indispensable handbook to understanding, communicating and implementing organization development approaches for both experienced practitioners and students.

In a neo-liberal era concerned with discourses of responsible individualism and the 'selfie', there is an increased interest in personal lives and experiences. In contemporary life, the personal is understood to be political and these ideas cut across both the social sciences and humanities. This handbook is specifically concerned with auto/biography, which sits within the field of narrative, complementing biographical and life history research. Some of the contributors emphasise the place of narrative in the construction of auto/biography, whilst others disrupt the perceived boundaries between the individual and the social, the self and the other. The collection has nine sections: creativity and collaboration; families and relationships; epistolary lives; geography; madness; prison lives; professional lives; 'race'; and social justice and disability. They illustrate the inter- and multi-disciplinary nature of auto/biography as a field. Each section features an introduction from a section editor, many of whom are established researchers and/or members of the British Sociological Association (BSA) Auto/Biography study group. The handbook provides the reader with cutting-edge

research from authors at different stages in their careers, and will appeal to those with an interest in auto/biography, auto-ethnography, epistolary traditions, lived experiences, narrative analysis, the arts, education, politics, philosophy, history, personal life, reflexivity, research in practice and the sociology of the everyday. Chapter 1: A Case for Auto/Biography; Julie Parsons and Anne Chappell. Section One: Creativity and Collaboration; edited by Gayle Letherby. This book is dedicated to improving healthcare through reducing delays experienced by patients. With an interdisciplinary approach, this new edition, divided into five sections, begins by examining healthcare as an integrated system. Chapter 1 provides a hierarchical model of healthcare, rising from departments, to centers, regions and the “macro system.” A new chapter demonstrates how to use simulation to assess the interaction of system components to achieve performance goals, and Chapter 3 provides hands-on methods for developing process models to identify and remove bottlenecks, and for developing facility plans. Section 2 addresses crowding and the consequences of delay. Two new chapters (4 and 5) focus on delays in emergency departments, and Chapter 6 then examines medical outcomes that result from waits for surgeries. Section 3 concentrates on management of demand. Chapter 7 presents breakthrough strategies that use real-time monitoring systems for continuous improvement. Chapter 8 looks at the patient appointment system, particularly through the approach of advanced access. Chapter 9 concentrates on managing waiting lists for surgeries, and Chapter 10 examines triage outside of emergency departments, with a focus on allied health programs. Section 4 offers analytical tools and models to support analysis of patient flows. Chapter 11 offers techniques for scheduling staff to match patterns in patient demand. Chapter 12 surveys the literature on simulation modeling, which is widely used for both healthcare design and process improvement. Chapter 13 is new and demonstrates the use of process mapping to represent a complex regional trauma system. Chapter 14 provides methods for forecasting demand for healthcare on a region-wide basis. Chapter 15 presents queueing theory as a method for modeling waits in healthcare, and Chapter 16 focuses on rapid delivery of medication in the event

of a catastrophic event. Section 5 focuses on achieving change. Chapter 17 provides a diagnostic for assessing the state of a hospital and using the state assessment to select improvement strategies. Chapter 18 demonstrates the importance of optimizing care as patients transition from one care setting to the next. Chapter 19 is new and shows how to implement programs that improve patient satisfaction while also improving flow. Chapter 20 illustrates how to evaluate the overall portfolio of patient diagnostic groups to guide system changes, and Chapter 21 provides project management tools to guide the execution of patient flow projects.

The new edition of a widely used, comprehensive graduate-level text and professional reference covering all aspects of labor economics, with substantial new material. This landmark graduate-level text combines depth and breadth of coverage with recent, cutting-edge work in all the major areas of modern labor economics. Its command of the literature and its coverage of the latest theoretical, methodological, and empirical developments make it also a valuable resource for practicing labor economists. This second edition has been substantially updated and augmented. It incorporates examples drawn from many countries, and it presents empirical methods using contributions that have proved to be milestones in labor economics. The data and codes of these research publications, as well as numerous tables and figures describing the functioning of labor markets, are all available on a dedicated website (www.labor-economics.org), along with slides that can be used as course aids and a discussion forum. This edition devotes more space to the analysis of public policy and the levers available to policy makers, with new chapters on such topics as discrimination, globalization, income redistribution, employment protection, and the minimum wage or labor market programs for the unemployed. Theories are explained on the basis of the simplest possible models, which are in turn related to empirical results. Mathematical appendixes provide a toolkit for understanding the models.

This completely updated, second edition offers articles that together develop a systematic understanding of family. It focuses not only on the dynamics of childcare, sexuality, and daily cohabitation, but also on the way that these patterns are shaped by the larger social culture. While some of the readings examine cross-cultural and historical variations in family patterns, highlighting the social organization of things that otherwise seem natural, the bulk of articles focus on the social relations of sexuality and intimacy, reproduction, parenting, and living together. Because these relations are typically gender relations, a concern with gender inequality is constant throughout the book. Compelling and insightful, this timely work synthesizes a broad range of approaches for all those interested in sociology of the family or women's studies.

World History Teaching in Asia is the first broad survey of the content and approaches used to teach world history in secondary schools and colleges in Asia. The collection has been crafted by scholars and educators whose goal was to shed light on the importance of history education and to foster understanding of and between Asian countries. These essays show how the teaching of world history in Asian countries has developed since World War II, with many interesting parallels, including the issue of Eurocentrism, but also distinctive national trends, and considerable changes over time. At a time when many Asian

countries are making great strides in education, this study of history education in Asia will be of real interest to educators, history scholars, and policy-makers worldwide.
