The Real Cost of Living helps you make better decisions, both big and small—decisions that involve money, but aren't all about money. Well-known personal finance expert Carmen Wong Ulrich makes personal finance personal and takes into account that we all have motivations that go way beyond number crunching. From marriage and family to career, investing, and more, Carmen examines the "real cost" of the choices we all make every day. *Is deciding whether to go back to work full-time after you have a child really all about money? Should it be? *Is prepaying a mortgage a smart-money move, or is it really about craving security and stability—and which means more to you? *How much do your bad habits really cost you? And is saving thousands of dollars enough of a motivation to get you to stop? *Are college degrees really worthwhile? And if so, how can you maximize the odds of gaining all the benefits of a degree, both personally and financially? *Is becoming your own boss the answer to your career malaise? Can you handle the costs? The Real Cost of Living is a rare melding of personal psychology and personal finance at an important time when we have discovered that having more money may not bring more happiness, but knowing what really will make you happy can be worth any cost. Algorithmic puzzles are puzzles involving well-defined procedures for solving problems. This book will provide an enjoyable and accessible introduction to algorithmic puzzles that will develop the reader's algorithmic thinking. The first part of this book is a tutorial on algorithm design strategies and analysis techniques. Algorithm design strategies — exhaustive search, backtracking, divide-and-conquer and a few others — are general approaches to designing step-by-step instructions for solving problems. Analysis techniques are methods for investigating such procedures to answer questions about the ultimate result of the procedure or how many steps are executed before the procedure stops. The discussion is an elementary level, with puzzle examples, and requires neither programming nor mathematics beyond a secondary school level. Thus, the tutorial provides a gentle and entertaining introduction to main ideas in high-level algorithmic problem solving. The second and main part of the book contains 150 puzzles, from centuries-old classics to newcomers often asked during job interviews at computing, engineering, and financial companies. The puzzles are divided into three groups by their difficulty levels. The first fifty puzzles in the Easier Puzzles section require only middle school mathematics. The sixty puzzle of average difficulty and forty harder puzzles require just high school mathematics plus a few topics such as binary numbers and simple recurrences, which are reviewed in the tutorial. All the puzzles are provided with hints, detailed solutions, and brief comments. The comments deal with the puzzle origins and design or analysis techniques used in the solution. The book should be of interest to puzzle lovers, students and teachers of algorithm courses, and persons expecting to be given puzzles during job interviews.

But in the wake of a devastating diagnosis, everything he thought was solid and real lay in pieces at his feet. Four years later, he's still sifting through the rubble of his life. His catering partnership occupies his days, while his nights are filled with dangerous sexual hookups and very bad decisions. Then the last person he ever expected to see again walks back into his life. Owen Hart's single biggest regret is the way he was forced to leave David behind-no explanations, no chance to make it right. Until now. Finally free of eight years of lies, Owen's back for the only man he's ever loved. An incendiary encounter in a club proves that time hasn't weakened their physical connection, but David's wounds run deeper than Owen's deception. And if David can't first forgive, Owen doesn't have a second chance in hell. Warning: This book contains an Australian transplant with a head full of secrets, a party planner with enough baggage to sink a battleship, and a surly teenager who just wants them both to get over themselves.

Real Science. Real Life. Deborah Beidel, Cynthia Bulik, and Melinda Stanley take a scientist-practitioner-educator approach and help students see and understand the connection between the science and practice of abnormal psychology. This leading-edge author team, consisting of three active researchers, clinicians, and educators, take a scientist-practitioner approach emphasizing the rich blend of both the science and practice of abnormal psychology throughout the text. The developmental trajectory of each condition is discussed where appropriate and scientific findings with respect to race and gender are incorporated into discussions about each condition. Biological findings are integrated with findings from social and behavioral sciences, highlighting the complexity of abnormal behavior and how it is often influenced by a wide range of variables. The authors encourage students to look at psychological disorders along a continuum and analyze disorders in terms of whether the individual's behavior creates distress or impairs daily functioning. Importantly, an effort is made to "bring to life" the nature of these conditions by providing vivid clinical descriptions. In addition to short descriptions used liberally throughout each chapter, a fully integrated case study is presented at the end of each chapter, again illustrating the interplay of biological, psychosocial and emotional factors.
