The Framework focuses on using business drivers to guide cybersecurity activities and considering cybersecurity risks as part of the organization's risk management processes. The Framework consists of three parts: the Framework Core, the Implementation Tiers, and the Framework Profiles. The Framework Core is a set of cybersecurity activities, outcomes, and informative references that are common across sectors and critical infrastructure. Elements of the Core provide detailed guidance for developing individual organizational Profiles. Through use of Profiles, the Framework will help an organization to align and prioritize its cybersecurity activities with its business/mission requirements, risk tolerances, and resources. The Tiers provide a mechanism for organizations to view and understand the characteristics of their approach to managing cybersecurity risk, which will help in prioritizing and achieving cybersecurity objectives.

"Rapid advances in financial technology are transforming the economic and financial landscape, offering wide-ranging opportunities while raising potential risks. Fintech can support potential growth and poverty reduction by strengthening financial development, inclusion, and efficiency—but it may pose risks to consumers and investors and, more broadly, to financial stability and integrity. National authorities are keen

to foster fintech's potential benefits and to mitigate its possible risks. Many international and regional groupings are now examining various aspects of fintech, in line with their respective mandates. There have been calls for greater international cooperation and guidance about how to address emerging issues, with some also cautioning against premature policy responses. In response to these calls from member countries, the IMF and the World Bank staff have developed the Bali Fintech Agenda, summarized in Annex I of this paper. The Agenda brings together and advances key issues for policymakers and the international community to consider as individual countries formulate their policy approaches. It distills these considerations into 12 elements arising from the experiences of member countries. The Agenda offers a framework for the consideration of high-level issues by individual member countries, including in their own domestic policy discussions. It does not represent the work program of the IMF or the World Bank, nor does it aim to provide specific guidance or policy advice. The Agenda will help guide the focus of IMF and World Bank staff in their work on fintech issues within their expertise and mandate, inform their dialogue with national authorities, and help shape their contributions to the work of the standard-setting bodies and other relevant international institutions on fintech issues. Implications for the work programs of the IMF and World Bank will be developed and presented to their respective Executive Boards for guidance as the nature and scope of the membership's needs—in response to the Bali Fintech Agenda—become clearer."

This paper highlights the emerging supervisory practices that contribute to effective cybersecurity risk supervision, with an emphasis on how these practices can be adopted by those agencies that are at an early stage of developing a supervisory approach to strengthen cyber resilience. Financial sector supervisory authorities the world over are working to establish and implement a framework for cyber risk supervision. Cyber risk often stems from malicious intent, and a successful cyber attack—unlike most other sources of risk—can shut down a supervised firm immediately and lead to systemwide disruptions and failures. The probability of attack has increased as financial systems have become more reliant on information and communication technologies and as threats have continued to evolve.

Security practitioners must be able to build a cost-effective security program while at the same time meet the requirements of government regulations. This book lays out these regulations in simple terms and explains how to use the control frameworks to build an effective information security program and governance structure. It discusses how organizations can best ensure that the information is protected and examines all positions from the board of directors to the end user, delineating the role each plays in protecting the security of the organization.

Cyber-attacks on financial institutions and financial market infrastructures are becoming more common and more sophisticated. Risk awareness has been increasing, firms actively manage cyber risk and invest in cybersecurity, and to some extent transfer and pool their risks through cyber liability insurance policies. This paper considers the properties of cyber risk, discusses why the private market can fail to provide the socially optimal level of cybersecurity, and explore how systemic cyber risk interacts with other financial stability risks. Furthermore, this study examines the current regulatory frameworks and supervisory approaches, and identifies information asymmetries and other inefficiencies that hamper the detection and management of systemic cyber risk. The paper concludes discussing policy measures that can increase the resilience of the financial system to systemic cyber risk.

Part 2 of 2 Today we are releasing Version 2 of the CFPB Supervision and Examination Manual, the guide our examiners use in overseeing companies that provide consumer financial products and services. Our manual, originally released in October 2011, describes how the CFPB supervises and examines these providers and gives our examiners direction on how to determine if companies are complying with consumer financial protection laws. We updated the supervision manual to reflect the renumbering of the consumer financial protection regulations for which the CFPB is responsible. The numbering conventions in the Code of Federal Regulations (CFR) allow the reader to easily identify which regulations fall under a particular agency's responsibility. The renumbering incorporated throughout the manual reflects the Dodd-Frank Act of 2010 transfer of rulemaking responsibility for many consumer financial protection regulations from other Federal agencies to the CFPB. In December 2011, the CFPB published its renumbered regulations in the Federal Register. The renumbered regulations also included certain technical changes but no

substantive changes. The CFPB's renumbering reflects the codification of its regulations in Title 12 (Banks and Banking), Chapter X (Bureau of Consumer Financial Protection) of the CFR. For example, before July 21, 2011, the Federal Reserve had rulemaking authority for the Home Mortgage Disclosure Act, which was codified in Title 12, Chapter II (Federal Reserve System), Part 203. The CFPB's implementing regulation for the Home Mortgage Disclosure Act is now codified in Title 12, Chapter X, Part 1003. With the growing volume of cyberattacks, it is important to ensure you are protected. This handbook will help you to identify potential cybersecurity risks, take steps to lessen those risks, and better respond in the event of an attack. It addresses the current overarching threat, describes how the technology works, outlines key legal requirements and ethical issues, and highlights special considerations for lawyers and practitioners of all types.
