Training, Qualification, and Oversight for Safety-Related Railroad Employees (US Federal Railroad Administration Regulation) (FRA) (2018 Edition) The Law Library presents the complete text of the Training, Qualification, and Oversight for Safety-Related Railroad Employees (US Federal Railroad Administration Regulation) (FRA) (2018 Edition). Updated as of May 29, 2018 FRA is establishing minimum training standards for all safety-related railroad employees, as required by the Rail Safety Improvement Act of 2008 (RSIA). The final rule requires each railroad or contractor that employs one or more safety-related railroad employee to develop and submit a training program to FRA for approval and to designate the minimum training qualifications for each occupational category of employee. The rule also requires most employers to conduct periodic oversight of their own employees and annual written reviews of their training programs to close performance gaps. The rule also contains specific training and qualification requirements for operators of roadway maintenance machines that can hoist, lower, and horizontally move a suspended load. Finally, the rule clarifies the existing training requirements for railroad and contractor employees that perform brake system inspections, tests, or maintenance. "Only recently has it been discovered that the brain produces new brain cells throughout our entire lives, a process called neurogenesis. The rate at which we form new brain cells has a profound influence upon every aspect of our life. When the rate of neurogenesis is low, we see cognitive deficits and memory problems, anxiety and stress, depression, and lowered immunity. Life is difficult. With high rates of neurogenesis we see the opposite: enhanced cognitive abilities, rapid learning, emotional resilience, protection from anxiety, stress and depression, heightened immunity and robust health. We flourish. Life is wonderful. Given the neurotoxic norms of society, it's almost universally true that your brain is working far below its capacity. It is deteriorating much faster than it needs to. What good is living longer if your brain can't go the distance? Recent discoveries in the emerging field of neurogenesis reveal the secrets to radically improve your brain's health. You can operate at a higher level than you ever dreamed possible--at any age!" --

In *Workforce Education*, William Bonvillian and Sanjay Sarma offer a roadmap for rebuilding America's working class. They argue that we need to train more workers more quickly, and they describe innovative methods of workforce education that are being developed across the country.

As the current recession ends, many workers will not be returning to the jobs they once held--those jobs are gone. In *The New Division of Labor*, Frank Levy and Richard Murnane show how computers are changing the employment landscape and how the right kinds of education can ease the transition to the new job market. The book tells stories of people at work--a high-end financial advisor, a customer service representative, a pair of successful chefs, a cardiologist, an automotive mechanic, the author Victor Hugo, floor traders in a London financial exchange. The authors merge these stories with insights from cognitive science, computer science, and economics to show how computers are enhancing productivity in many jobs even as they eliminate other jobs--both directly and by sending work offshore. At greatest risk are jobs that can be expressed in programmable rules--blue collar, clerical, and similar work that requires moderate skills and used to pay middle-class wages. The loss of these jobs leaves a growing division between those who can and cannot earn a good living in the computerized economy. Left unchecked, the division threatens the nation's democratic institutions. The nation's challenge is to recognize this division and to prepare the population for the high-wage/high-skilled jobs that are rapidly growing in number--jobs involving extensive problem solving and interpersonal communication. Using detailed examples--a second grade classroom, an IBM managerial training program, Cisco Networking Academies--the authors describe how these skills can be taught and how our adjustment to the computerized workplace can begin in earnest.

Most of the content in the Career Pathways Handbook is based on a series of career profiles - each one packed with four pages of valuable information, including the latest U.S. employment statistics and wage information, career dialogues with real people who work in the occupations, and extensive information for identifying and comparing related occupations. Each profile uses a consistent format to allow for easy reading and useful comparisons between occupations. While this book is based on a foundation of 154 different occupations, it also includes valuable information on several hundred occupations via the career path and related occupations tables. It is important to me that the information in this book will not only be useful to readers, but also be as current and reliable as possible. Therefore I have included the most recent information from reliable Government sources, as well as my own proprietary information from 20 years of extensive occupational research. The Government sources are U.S. Department of Labor (DOL) programs. For example, I have incorporated information from DOL's new O*NET Database, which includes the occupation titles and definitions, common job tasks, key skills and abilities, and related occupations. I have added the most recent employment statistics and wage information from DOL's Bureau of Labor Statistics. Finally, from our own research, I have added career path and real people career dialogue elements, and have enhanced and expanded the DOL information throughout. For example, the O*NET Related Occupations lists were significantly expanded and education/training information, along with growth and wage data, were added to make occupational comparisons more meaningful. The Job Tasks have been expanded to make them more useful. The education and training information is based on DOL's Typical Education Levels, but has also been expanded for this book. I have also written or rewritten many of the job outlook and analysis statements that are incorporated into the Employment Outlook sections. Finally, I have included a number of resource guides to help job seekers and career explorers reach their goals. Beginning on page 617, there are guides on Planning Your Career, Researching Occupations, Education & Training Options, Looking for a Job, Competing for a Job, Writing a Resume, Writing a Cover Letter, Completing the Application, Preparing for the Interview, and Common Interview Questions. There are countless numbers of books (both good and bad ones) on all of these subjects, so I've included a list of my favorite books on my website under Readers' Resources (see www.cassio.com). Also included on this website is an online guide to State Training & Postsecondary Education Directories and a list of my Favorite Job Websites. Best regards, Jim Cassio www.cassio.com An absolutely essential career reference for finding comprehensive job information spanning a total of 150+ occupations. This is the all-inclusive guide to helping a job seeker go from planning a career to looking for a job. Regina Jimenez, Research Librarian, Folsom Lake College This book is a wonderful and powerful tool for guidance counselors and individuals who are looking to start, change, or enhance their careers.
