Active investing strategies to profit from world-changing trends In *The Next Great Bull Market*, Matthew McCall advocates an approach he calls, "Conversification," meaning concentrating your investments in specific areas that are poised to benefit from global change. The areas of change addressed throughout this book include the green movement, infrastructure expansion, commodities, peak oil, the next great commodity-water-aging baby boomers, a growing global middle class, geopolitical upheavals, and the explosion of exchange-traded funds. With today's world characterized by rapid change on many different levels, McCall's approach holds even greater promise in the years ahead. Page by page, he provides strategies for both conservative investors interested in long-term growth and aggressive investors interested in generating fast profits. Describes the dynamics driving each major change and provide specific strategies to take advantage of them Shows how to profit from short-term swings in fast-moving sectors of the world economy Highlights how to use various investment vehicles, including ETFs, stocks, and options Investors who understand and anticipate the changes ahead stand to profit handsomely. With *The Next Great Bull Market* as your guide, you'll quickly discover how the trends that are changing the world can be used to enhance the performance of your portfolio.

The chemicals manufacturing industry is a vibrant, global business that encompasses many important sectors: from commodity chemicals, to specialty chemicals to custom manufacturing. Key products include biochemicals, nanochemicals, polymers, petrochemicals, fertilizers, plastics, coatings, ceramics, solvents, additives, dyes and many other products basic to home and business needs. In addition, the pharmaceuticals industry is often included when discussing chemicals. *Plunkett's Chemicals, Plastics & Coatings Industry Almanac 2008* covers such sectors, providing a market research tool for competitive intelligence, strategic planning, business analysis and even employment searches. Our coverage includes business trends analysis and industry statistics. The almanac also contains a chemicals, plastics and coatings business glossary and a listing of industry contacts, such as industry associations and government agencies. Next, we profile hundreds of leading companies. Our 400 company profiles include complete business descriptions and up to 27 executives by name and title. A CD-ROM accompanies the book version and enables you to search, filter, view and export selected companies and organizations -- a handy tool for creating mailing lists.

What does "excellent manufacturing management" mean? Management texts to date have emphasized that it is, above methods such as SPC or TQM, a matter of "intangibles" and "culture". This book takes the myth out of management excellence; it can be learned and practiced. First, manage the three core processes, strategy deployment, product and process development, and the supply chain. And secondly, pay attention to the dimension of management quality, direction setting, integration and delegation, communication, participation, measurement, and employee development. This book explains management quality and demonstrates how it is implemented, with ten plant tours through world-class factories from different industries.

Although formal social impact assessment of changing technologies in U.S. agriculture is still in its infancy, scholars have been documenting the effects of new technology throughout the twentieth century. In this collection, Professors Berardi and Geisler bring together historically relevant research and a carefully chosen cross section of contemporary work. Their review of the literature is followed by an evaluation of the effects of mechanization on labor and production, written in 1904, which provides a backdrop for papers from the 1940s and 1950s examining the mechanization of agriculture in the South, in the Midwest, and in rural areas in general. Subsequent chapters offer present-day insights on such topics as the socioeconomic consequences of automated vegetable and tobacco harvesting, center-pivot irrigation, and organic and no-till cultivation. The authors also look at compensation and adjustment programs for displaced labor, the relationship between technology and agribusiness growth, and the effectiveness of university programs that prepare students to perform social impact assessments in agriculture. The edited proceedings of a spirited roundtable discussion on new directions for the study of the social impacts of farm technology and the political

economy of agriculture provide the thought-provoking conclusion to this overview of the field.
