This volume contains papers selected for presentation at the 6th IAPR Workshop on Document Analysis Systems (DAS 2004) held during September 8–10, 2004 at the University of Florence, Italy. Several papers represent the state of the art in a broad range of “traditional” topics such as layout analysis, applications to graphics recognition, and handwritten documents. Other contributions address the description of complete working systems, which is one of the strengths of this workshop. Some papers extend the application domains to other media, like the processing of Internet documents. The peculiarity of this 6th workshop was the large number of papers related to digital libraries and to the processing of historical documents, a taste which frequently requires the analysis of color documents. A total of 17 papers are associated with these topics, whereas two years ago (in DAS 2002) only a couple of papers dealt with these problems. In our view there are three main reasons for this new wave in the DAS community. From the scientific point of view, several research fields reached a thorough knowledge of techniques and problems that can be effectively solved, and this expertise can now be applied to new domains. Another incentive has been provided by several research projects funded by the EC and the NSF on topics related to digital libraries.

All areas of education policy and practice are driven by unconscious investments in ignorance, or idealised images of transformation of the individual, society and economy. The promise of fulfilment and associated threats of disappointment or destruction tend to dominate conscious accounts of education. Other more vulnerable or unspeakable aspects of our engagements with education are covered over when we account for learning, and justify teaching as professionals, policy makers and researchers; but they leak out in slips, lapses, emphasis, paradox and contradiction. Freud's account of resistance and repetition; Lacan's theorisation of the role of language and desire; and Žižek's elaboration of these ideas in a theory of ideology and enjoyment – all provide tools for exploring the vulnerable, uncomfortable and often surprising other side of education: the hidden, unconscious and unspoken desires that we invest in educational institutions and practices. This collection offers glimpses of this other side of education produced in empirical studies using a variety of methodological approaches: practice-based theoretical speculation, policy analysis, ethnography, interviews and free associative methods, as well as ideological critique of the field of critical educational practice and research. The book

foregrounds political and unconscious aspects of investments in the fields of education and educational research. The chapters in this book were originally published as articles in Taylor and Francis journals.

This book challenges the traditional approach to international law by concentrating on international humanitarian law and placing the focus beyond States: it reflects on current legal, policy and practical issues that concern non-State actors in and around situations of armed conflict. With the emergence of the nation-State, international law was almost entirely focused on inter-State relations, thus excluding - for the most part - non-State entities. In the modern era, such a focus needs to be adjusted, in order to encompass the various types of functions and interactions that those entities perform throughout numerous international decision-making processes. The contributions that comprise this volume are oriented towards a broad readership audience in the academic and professional fields related to international humanitarian law, international
