Writing Review including: Essay Revision, Agreement, Sentence Structure, and Sentence Logic, and much more... Passenger screening at commercial airports in the United States has gone through significant changes since the events of September 11, 2001. In response to increased concern over terrorist attacks on aircrafts, the Transportation Security Administration (TSA) has deployed security systems of advanced imaging technology (AIT) to screen passengers at airports. To date (December 2014), TSA has deployed AITs in U.S. airports of two different technologies that use different types of radiation to detect threats: millimeter wave and X-ray backscatter AIT systems. X-ray backscatter AITs were deployed in U.S. airports in 2008 and subsequently removed from all airports by June 2013 due to privacy concerns. TSA is looking to deploy a second-generation X-ray backscatter AIT equipped with privacy software to eliminate production of an image of the person being screened in order to alleviate these concerns. This report reviews previous studies as well as current processes used by the Department of Homeland Security and equipment manufacturers to estimate radiation exposures resulting from backscatter X-ray advanced imaging technology system use in screening air travelers. Airport Passenger Screening Using Backscatter X-Ray Machines examines whether exposures comply with applicable health

and safety standards for public and occupational exposures to ionizing radiation and whether system design, operating procedures, and maintenance procedures are appropriate to prevent over exposures of travelers and operators to ionizing radiation. This study aims to address concerns about exposure to radiation from X-ray backscatter AITs raised by Congress, individuals within the scientific community, and others.

The response of the U.S. federal government to the events of September 11, 2001 has reflected the challenge of striking a balance between implementing security measures to deter terrorist attacks while at the same time limiting disruption to air commerce. Airport and Aviation Security: U.S. Policy and Strategy in the Age of Global Terrorism is a comprehensive reference that examines the persistent threats to aviation security that led up to the terrorist attacks of September 11th, describes subsequent terror plots against aviation assets, and explores U.S. efforts to counter and mitigate these threats. Addressing the homeland security challenges facing the U.S. in the age of terrorism, this text explores: Security protocol prior to 9/11 Precursors to 9/11 The rising threat of Al Qaeda Tactical and congressional response to 9/11, including new legislation The broader context of risk assessment Intelligence gathering Airport security, including passenger, baggage, and employee

screening Airline in-flight security measures Airport perimeter security The threat of shoulder-fired missiles Security for GA (general aviation) operations and airports Beginning with a historical backdrop describing the dawn of the age of global terrorism in the 1960s and continuing up until the present time, the book demonstrates the broad social and political context underlying recent changes in the aviation security system as a direct result of the 9/11 attacks. Coverage examines ongoing threats and vulnerabilities to the aviation infrastructure, including an exploration of how past terrorist incidents have come to shape U.S. policy and strategy.

Oxford and Cambridge now require students to complete an exam called the Thinking Skills Assessment (TSA) before they invite them for interview. This exam forms a large part of their assessment of candidates prior to meeting them; good TSA scores can sometimes lead to interviews despite poor results in public exams and a poor TSA score has been known to lead to rejection of a candidate before interview despite flawless public exam scores. This textbook is designed to help students improve their performance in the TSA through a number of methods: 1. Exam Strategy This exam is unlike any exam most candidates will have ever faced. The textbook arms students with simple but extremely effective strategies designed to

save candidates time and also to use the nature of the exam to guide them towards more correct answers. 2. Approach The textbook also shows candidates simple approaches to the unique style of question presented in the TSA. It helps candidates get comfortable and confident with the questions the TSA requires candidates to complete. 3. Practice With 130 practice questions which are all designed in a similar way to the questions on the TSA exam, along with numerous worked examples, candidates will go into the exam having more experience of the questions. There is also a comprehensive explained answer section so candidates can check their answers and also see different methods to evaluate the questions and get to the correct answer more often, faster.

But what if you had no choice? It would be easy to underestimate Chloe Sevre... She's a freshman honor student, a legging-wearing hot girl next door, who also happens to be a psychopath. She spends her time on yogalates, frat parties and plotting to kill Will Bachman, a childhood friend who grievously wronged her. Chloe is one of seven students at her DC-based college who are part of an unusual clinical study of psychopaths—students like herself who lack empathy and can't comprehend emotions like fear or guilt. The study, led by a renowned psychologist, requires them to wear smart watches that track their moods and movements. When one of the students in the study is found murdered in the psychology building, a dangerous game of cat and mouse begins, and Chloe goes from hunter to prey. As she races to identify the killer and put her own plan for revenge into action, she'll be forced to decide if she can trust any of her fellow psychopaths—and everybody knows you should never trust a psychopath.

The Transportation Security Administration requested a study by the National Research Council (NRC) to establish the Committee on Airport Passenger Screening: Millimeter Wave Machines to evaluate two models of active millimeter wave scanners: the L3 ProVision 1 and L3 ProVision 2. This study addresses the issue of whether millimeter wave machines used at

This book addresses new technologies being considered by the Federal Aviation Administration (FAA) for screening airport passengers for concealed weapons and explosives. The FAA is supporting the development of promising new technologies that can reveal the presence not only of metal-based weapons as with current screening technologies, but also detect plastic explosives and other non-metallic threat materials and objects, and is concerned that these new technologies may not be appropriate for use in airports for other than technical reasons. This book presents discussion of the health, legal, and public acceptance issues that are likely to be raised regarding implementation of improvements in the current electromagnetic screening technologies, implementation of screening systems that detect traces of explosive materials on passengers, and implementation of systems that generate images of passengers beneath their clothes for analysis by human screeners.

Stability tests were conducted in two and three dimensions to identify a stable breakwater cross section for a proposed breakwater at Noyo Harbor, California. Additionally, two-dimensional transmission tests were performed to determine a small-scale cross section that reproduced transmission of the proposed breakwater cross section. Five two-dimensional stability plans were tested in a wave tank at a 1:43.3 scale. Plans 1 and 2 consisted of Accropode armor units, and Plans 3 through S were performed with dolos armor units. Plans 1 and 3, constructed of 9.0-cu m Accropodes and 7.9-cu m dolosse, were stable but conservative in design. Plan 2, consisting of 7.6-cu m Accropodes, was stable. Plans 4 (3.8-cu m dolosse) and 5 (5.9-cu m dolosse) were moderately stable. Three-dimensional stability tests were conducted for 17 plans with two breakwater configurations. Approximately 425 by 425 m of prototype bathyrneter was reproduced in a basin at a 1:50 scale. The original breakwater configuration consisted of 14- and 8.3-cu m Accropode armor units. It was necessary to place a metal strip at the base of the structure, which simulated a toe trench in prototype, to obtain toe stability with the original breakwater configuration. Results of tests with the modified breakwater indicated a stone buttress was sufficient to stabilize the toe. Armor units tested with the modified plan included 14- and 8.3-cu m Accropodes,

11.9-and 7.0-cu m Core-Locs, and 19-and 8.3-cu m Accropodes. The 19-cu m Accropode was required to stabilize the north roundhead for five successive storms of depth-limited waves for the design periods. A heavier model Core-Loc unit was not available for testing, but based on observations, a Core-Loc weight of at least 16.9 cu m would be necessary for stability. (MM).
